# PENTRATION TESTING

A person is seen from behind, sitting at a desk in a dimly lit room. They are looking at a large computer monitor that displays a vibrant, pixelated cityscape at night with many lights. The person has dark hair and is wearing a dark t-shirt. On the desk, there are two keyboards and a mouse. To the right of the person, there is a tall, dark server rack. The overall atmosphere is mysterious and tech-oriented.

Pentesting with Google dorks Introduction: [\[Link\]](#)

Bhaskar Soni

# Phase 4 – Mapping the application and attack surface [Cont.]

Fingerprinting web server: [\[Link\]](#)

Use Nmap for fingerprinting web server: [\[Link\]](#)

Review webs servers metatables for information leakage: [\[Link\]](#)

Enumerate applications on web server: [\[Link\]](#)

Identify application entry points: [\[Link\]](#)

Map execution path through application: [\[Link\]](#)

Fingerprint web application frameworks: [\[Link\]](#)

# Phase 5 – Understanding and exploiting OWASP top 10 vulnerabilities

A closer look at all owasp top 10 vulnerabilities:

[\[Link\]](#)

Injection: [\[Link\]](#)

Broken authentication and session management:

[\[Link\]](#)

Cross-site scripting: [\[Link\]](#)

Insecure direct object reference: [\[Link\]](#)

Security misconfiguration: [\[Link\]](#)

Sensitive data exposure: [\[Link\]](#)

Missing functional level access controls: [\[Link\]](#)

Cross-site request forgery: [\[Link\]](#)

Using components with known vulnerabilities:

[\[Link\]](#)

Unvalidated redirects and forwards: [\[Link\]](#)

Bhaskar Soni

# Phase 6 – Session management testing

Bypass authentication using cookie manipulation:

[\[Link\]](#)

Cookie Security Via httponly and secure Flag - OWASP: [\[Link\]](#)

Penetration testing Cookies basic: [\[Link\]](#)

Session fixation 1: [\[Link\]](#)

Session fixation 2: [\[Link\]](#)

Session fixation 3: [\[Link\]](#)

Session fixation 4: [\[Link\]](#)

CSRF - Cross site request forgery 1: [\[Link\]](#)

CSRF - Cross site request forgery 2: [\[Link\]](#)

CSRF - Cross site request forgery 3: [\[Link\]](#)

CSRF - Cross site request forgery 4: [\[Link\]](#)

CSRF - Cross site request forgery 5: [\[Link\]](#)

Session puzzling 1: [\[Link\]](#)

Admin bypass using session hijacking: [\[Link\]](#)

Bhaskar Soni

# Phase 7 – Bypassing client-side controls

What is hidden forms in HTML: [\[Link\]](#)

Bypassing hidden form fields using tamper data: [\[Link\]](#)

Bypassing hidden form fields using Burp Suite: [\[Link\]](#)

Changing price on eCommerce website using parameter tampering: [\[Link\]](#)

Understanding cookie in detail: [\[Link\]](#)

Cookie tampering with tamper data: [\[Link\]](#)

Cookie tamper part 2: [\[Link\]](#)

Understanding referer header in depth using Cisco product: [\[Link\]](#)

Introduction to ASP.NET viewstate: [\[Link\]](#)

ASP.NET viewstate in depth: [\[Link\]](#)

Analyse sensitive data in ASP.NET viewstate: [\[Link\]](#)

Bhaskar Soni

# Phase 7 – Bypassing client-side controls [Cont.]

Cross-origin-resource-sharing explanation with example: [\[Link\]](#)

CORS demo 1: [\[Link\]](#)

CORS demo 2: [\[Link\]](#)

Security headers: [\[Link\]](#)

Security headers 2: [\[Link\]](#)

# Phase 8 - Attacking authentication

## /login

Brute-force login panel: [\[Link\]](#)

Username enumeration: [\[Link\]](#)

Username enumeration with bruteforce password attack: [\[Link\]](#)

Authentication over insecure HTTP protocol: [\[Link\]](#)

Authentication over insecure HTTP protocol: [\[Link\]](#)

Forgot password vulnerability - case 1: [\[Link\]](#)

Forgot password vulnerability - case 2: [\[Link\]](#)

Login page autocomplete feature enabled: [\[Link\]](#)

Testing for weak password policy: [\[Link\]](#)

Test for credentials transportation using SSL/TLS certificate: [\[Link\]](#)

Basics of MySQL: [\[Link\]](#)

Testing browser cache: [\[Link\]](#)

Bhaskar Soni

# Phase 8 – Attacking authentication /login [Cont.]

Bypassing login panel -case 1: [\[Link\]](#)

Bypass login panel - case 2: [\[Link\]](#)

Bhaskar Soni

# Phase 9: Attacking Access Controls

Finding admin panel: [\[Link\]](#)

Finding admin panel and hidden files and directories: [\[Link\]](#)

Finding hidden webpages with dirbusater: [\[Link\]](#)

IDOR case 1: [\[Link\]](#)

IDOR case 2: [\[Link\]](#)

IDOR case 3: [\[Link\]](#)

What is privilege escalation: [\[Link\]](#)

Privilege escalation - Hackme bank - case 1: [\[Link\]](#)

Privilege escalation - case 2: [\[Link\]](#)

# Phase 10: Attacking Input Validations

HTTP verb tampering: [\[Link\]](#)

HTTP verb tampering demo: [\[Link\]](#)

HTTP splitting/smuggling:

Detailed introduction: [\[Link\]](#)

Demo 1: [\[Link\]](#)

Bhaskar Soni

# Phase 11 – Generating and testing error codes

Generating normal error codes by visiting files that may not exist on the server - for example visit `chintan.php` or `chintan.aspx` file on any website and it may redirect you to `404.php` or `404.aspx` or their customer error page. Check if an error page is generated by default web server or application framework or a custom page is displayed which does not display any sensitive information. Use BurpSuite fuzzing techniques to generate stack trace error codes: [\[Link\]](#)

# Phase 12 – Weak cryptography testing

SSL/TLS weak configuration explained: [\[Link\]](#)

Testing weak SSL/TLS ciphers: [\[Link\]](#)

Test SSL/TLS security with Qualys guard: [\[Link\]](#)

Sensitive information sent via unencrypted channels: [\[Link\]](#)

Bhaskar Soni

# Phase 13 – Business logic vulnerability

What is a business logic flaw: [\[Link\]](#)

The Difficulties Finding Business Logic Vulnerabilities with Traditional Security Tools: [\[Link\]](#)

How To Identify Business Logic Flaws: [\[Link\]](#)

Business Logic Flaws: Attacker Mindset: [\[Link\]](#)

Business Logic Flaws: Dos Attack On Resource: [\[Link\]](#)

Business Logic Flaws: Abuse Cases: Information Disclosure: [\[Link\]](#)

Business Logic Flaws: Abuse Cases: iPod Repairman Dupes Apple: [\[Link\]](#)

Business Logic Flaws: Abuse Cases: Online Auction: [\[Link\]](#)

Business Logic Flaws: How To Navigate Code Using ShiftLeft Ocular: [\[Link\]](#)

Bhaskar Soni

# Phase 13 – Business logic vulnerability [Cont.]

Business Logic Security Checks: Data Privacy Compliance: [\[Link\]](#)

Business Logic Security Checks: Encryption Compliance: [\[Link\]](#)

Business Logic Security: Enforcement Checks: [\[Link\]](#)

Business Logic Exploits: SQL Injection: [\[Link\]](#)

Business Logic Exploits: Security Misconfiguration: [\[Link\]](#)

Business Logic Exploits: Data Leakage: [\[Link\]](#)

Demo 1: [\[Link\]](#)

Demo 2: [\[Link\]](#)
