# Windows

Incident Response

Users

In Incident response it is very necessary to investigate the user activity. It is used to find if there is any suspicious user account is present or any restricted permissions have been assigned to a user. By checking the user account one can be able to get answers to questions like which user is currently logged in and what kind of a user account one has.
The ways one can view the user accounts are:

Local users

To view the local user accounts in GUI, press **'Windows+R'**, then type **'lusrmgr.msc'.**
Now click on 'okay', and here you will be able to see the user accounts and their descriptions.

net user

You can now open the command prompt and run it as an administrator. Then type the command '**net user**' and press enter. You can now see the user accounts for the system and the type of account it is.

net user

```
Microsoft Windows [Version 10.0.18362.1016]
(c) 2019 Microsoft Corporation. All rights reserved.

C:\Users\raj>net user

User accounts for \\DESKTOP-A0AP0OM

-------------------------------------------------------------------------------
Administrator            DefaultAccount            Guest
raj                      WDAGUtilityAccount
The command completed successfully.

C:\Users\raj>
```

net localgroup

'**Net localgroup groupname**' command is used to manage local user groups on a system. By using this command, an administrator can add local or domain users to a group, delete users from a group, create new groups and delete existing groups.

Open Command prompt and run as an administrator then type '**net local group administrators**' and press enter.

net local group administrators

```
C:\Users\raj>net localgroup administrators
Alias name       administrators
Comment          Administrators have complete and unrestricted access to the computer/domain

Members

-------------------------------------------------------------------------------
Administrator
raj
The command completed successfully.
```

To view the local user accounts in PowerShell, open PowerShell as an administrator, type '**Get-LocalUser**' and press enter. You will be able to see the local user accounts, with their names, if they are enabled and their description.

Get-LocalUser

```
PS C:\Users\raj> Get-LocalUser

Name                Enabled Description
----                ------- -----------
Administrator       False   Built-in account for administering the computer/domain
DefaultAccount      False   A user account managed by the system.
Guest               False   Built-in account for guest access to the computer/domain
raj                 True
WDAGUtilityAccount  False   A user account managed and used by the system for Windows
```
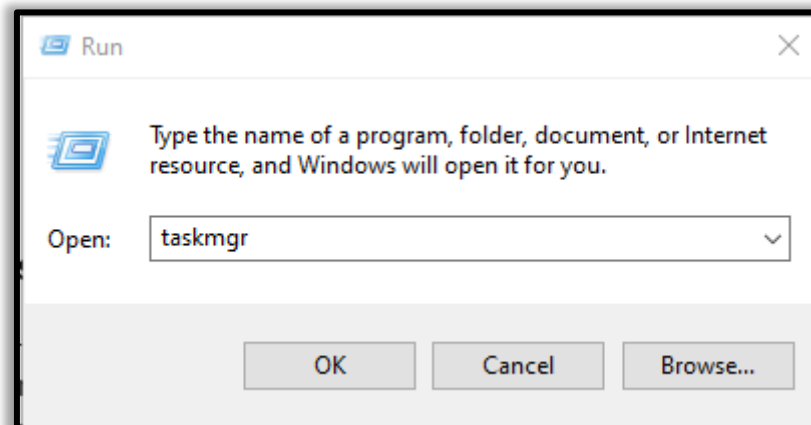

Processes

To get the list of all the processes running on the system, you can use '*tasklist*' command for this purpose. By making use of this command, you can get a list of the processes the memory space used, running time, image file name, services running in the process etc
To view the processes, you can use the following methods;

Task Manager

To view the running processes in a GUI, press '**Windows+R**', then type '**taskmgr.exe**'.

Now click on '**OK**' and you will be able to see all the running processes in your system and will be able to check if there is any unnecessary process running.

tasklist

To view the processes in the command prompt, Open the command prompt as an administrator and type 'tasklist' and press enter. Here you will be able to see all the running processes with their Process ID (PID) and their session name and the amount of memory used.

tasklist

```
C:\Users\raj>tasklist

Image Name                     PID Session Name        Session#    Mem Usage

Windows system has an extremely powerful tool with the Windows Management Instrumentation Command (WMIC). Wmic is very useful when it comes to incident response. This tool is enough to notice some abnormal signs in the system. This command can be used in the Command-prompt as well as PowerShell when run as an administrator. The syntax is '**wmic process list full**'.

wmic process list full

```
PS C:\Windows\system32> wmic process list full
```

To get more details about the parent process IDs, Name of the process and the process ID, open PowerShell as an administrator and type '**wmic process get name,parentprocessid,processid**'. This would be the next step after you determine which process is performing a strange network activity. You will see the following details.

wmic process get name,parentprocessid,processid

```
PS C:\Windows\system32> wmic process get name,parentprocessid,processid
Name                                                ParentProcessId  ProcessId
System Idle Process                                 0                0
System                                              0                4
Registry                                            4                120
smss.exe                                            4                476
csrss.exe                                           676              696
wininit.exe                                         676              784
services.exe                                        784              928
lsass.exe                                           784              936
svchost.exe                                         928              628
svchost.exe                                         928              632
fontdrvhost.exe                                     784              776
svchost.exe                                         928              1072
svchost.exe                                         928              1124
svchost.exe                                         928              1340
svchost.exe                                         928              1380
svchost.exe                                         928              1388
svchost.exe                                         928              1400
svchost.exe                                         928              1396
svchost.exe                                         928              1548
svchost.exe                                         928              1556
svchost.exe                                         928              1724
svchost.exe                                         928              1772
svchost.exe                                         928              1780
```

To get the path of the Wmic process, open PowerShell and type **'wmic process where 'ProcessID=PID'
get Commandline'** and press enter.

```
wmic process where 'ProcessID=PID' get Commandline
```

```
PS C:\Windows\system32> wmic process where "ProcessID=4420" get CommandLine
CommandLine
"C:\Program Files (x86)\TeamViewer\TeamViewer_Service.exe"

PS C:\Windows\system32>
```
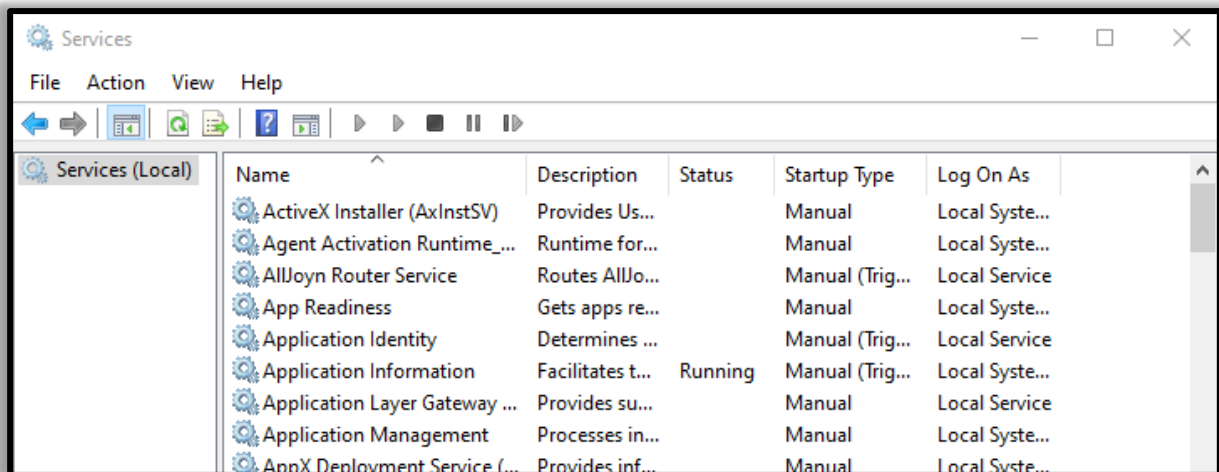

Services

To identify if there is any abnormal service running in your system or some service is not functioning properly, you can view your services.

To view all the services in GUI, press '**Windows+R**' and type '**services.msc**'.

Now click on '**Ok**' to see the list of processes.

To start and view the list of services that are currently running in your system, open the command prompt as an administrator, type '**net start**' and press enter.

net start

```
C:\Users\raj>net start
These Windows services are started:

   Application Information
   AVCTP service
   Background Tasks Infrastructure Service
   Base Filtering Engine
   Bluetooth Audio Gateway Service
   Bluetooth Support Service
   Capability Access Manager Service
   Clipboard User Service_4f10ff4
```

sc query

To view whether a service is running and to get its more details like its service name, display name, etc.

sc query | more

```
C:\Users\raj>sc query | more

GUI

Task Scheduler is a component in the Windows which provides the ability to schedule the launch of programs or any scripts at a pre-defined time or after specified time intervals. You can view these scheduled tasks which are of high privileges and look suspicious.To view the task Scheduler in GUI, then go the path and press enter.
C:\ProgramData\Microsoft\Windows\Start Menu\Programs\Administrative Tools

To view the schedule tasks in the command prompt, run command prompt as an administrator, type **'schtasks'** and press enter.

```
schtasks
```

```
C:\Users\raj>schtasks

Startup

The startup folder in Windows, automatically runs applications when you log on. So, an incident handler, you should observe the applications that auto start.

To view the applications in Startup menu in GUI, open the task manager and click on the 'Startup' menu. By doing this, you can see which applications are enabled and disabled on startup. On opening the following path, it will give you the same option
dir /s /b "C:\Users\raj\AppData\Roaming\Microsoft\Windows\Start Menu\Programs\Startup"
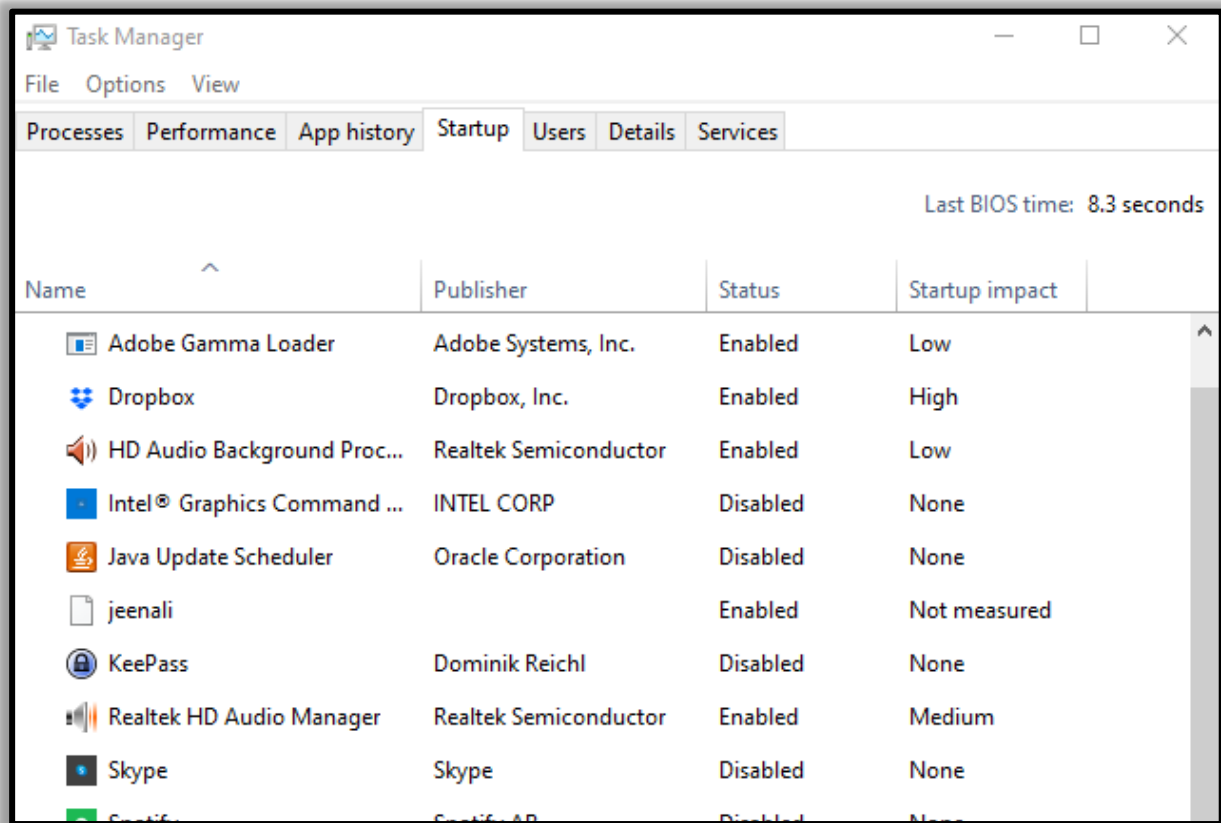

To view, the startup applications in the PowerShell run the PowerShell as an administrator, type 'wmic startup get caption,command' and press enter.

```
wmic startup get caption,command
```

```
PS C:\Windows\system32> wmic startup get caption,command
Caption              Command
OneDriveSetup        C:\Windows\SysWOW64\OneDriveSetup.exe /thfirstsetup
OneDriveSetup        C:\Windows\SysWOW64\OneDriveSetup.exe /thfirstsetup
jeenali              jeenali.txt
uTorrent             "C:\Users\raj\AppData\Roaming\uTorrent\uTorrent.exe"   /MINIMIZED
Adobe Gamma Loader   C:\PROGRA~2\COMMON~1\Adobe\CALIBR~1\ADOBEG~1.EXE
SecurityHealth       %windir%\system32\SecurityHealthSystray.exe
RtHDVCpl             "C:\Program Files\Realtek\Audio\HDA\RtkNGUI64.exe" /s
RtHDVBg_PushButton   "C:\Program Files\Realtek\Audio\HDA\RAVBg64.exe" /IM

Registry

Sometimes if there is a presence of unsophisticated malware it can be found by taking a look at the Windows Registry's run key.

GUI

To view the GUI of the registry key, you can open REGEDIT reach the run key manually.
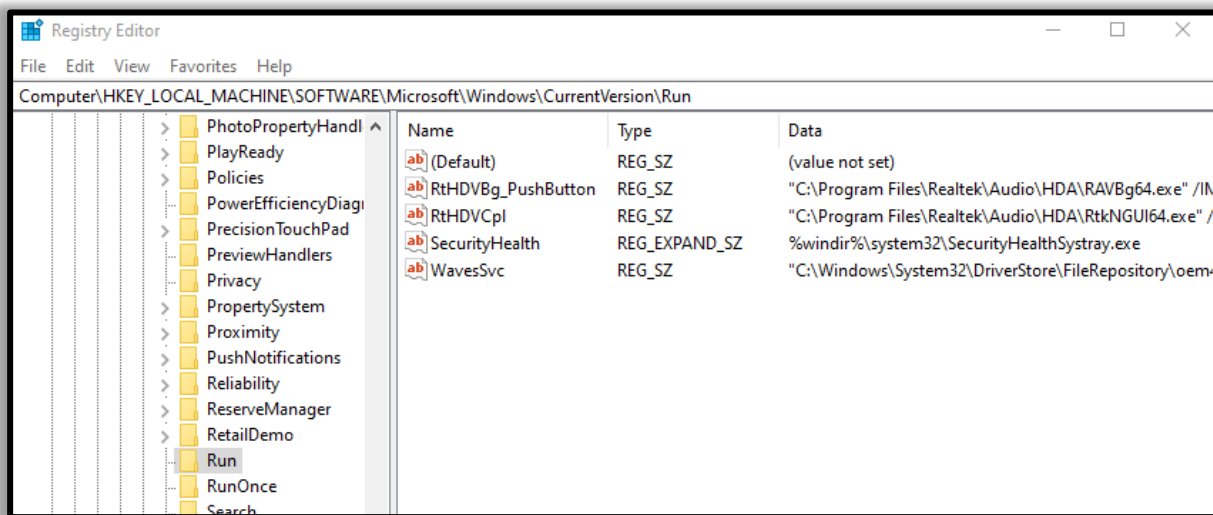

You can also view the registry of the Local Machine of the Run key in the PowerShell, by running it as an administrator and then type
'reg query HKLM\SOFTWARE\Microsoft\Windows\CurrentVersion\Run' and press enter.

```
reg query HKLM\SOFTWARE\Microsoft\Windows\CurrentVersion\Run
```

```
PS C:\Windows\system32> reg query HKLM\SOFTWARE\Microsoft\Windows\CurrentVersion\Run

HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Run
    SecurityHealth     REG_EXPAND_SZ     %windir%\system32\SecurityHealthSystray.exe
    RtHDVCpl      REG_SZ     "C:\Program Files\Realtek\Audio\HDA\RtkNGUI64.exe" /s
    RtHDVBg_PushButton     REG_SZ     "C:\Program Files\Realtek\Audio\HDA\RAVBg64.exe" /IM
    WavesSvc      REG_SZ     "C:\Windows\System32\DriverStore\FileRepository\oem49.inf_amd64_5ff3

PS C:\Windows\system32>
```

You can also view the registry of the Current User of the Run key in the PowerShell, by running it as an administrator and then type
'reg query HKEY_CURRENT_USER\SOFTWARE\Microsoft\Windows\CurrentVersion\Run' and press enter.

```
reg query HKEY_CURRENT_USER\SOFTWARE\Microsoft\Windows\CurrentVersion\Run
```

```
PS C:\Windows\system32> reg query HKEY_CURRENT_USER\SOFTWARE\Microsoft\Windows\CurrentVersion\Run

HKEY_CURRENT_USER\SOFTWARE\Microsoft\Windows\CurrentVersion\Run
    uTorrent     REG_SZ     "C:\Users\raj\AppData\Roaming\uTorrent\uTorrent.exe"  /MINIMIZED

PS C:\Windows\system32>
```

Active TCP and UDP Port

As an Incident Responder you should carefully pay attention to the active TCP and UDP ports of your system.

netstat

The network statistics of a system can be using a tool. The criteria tested are incoming and outgoing connections, routing tables, port listening, and usage statistics. Open the command prompt, type 'netstat –ano' and press enter.

netstat –ano

```
C:\Users\raj>netstat -ano

Active Connections

  Proto  Local Address          Foreign Address        State           PID
  TCP    0.0.0.0:135            0.0.0.0:0              LISTENING       1072

```

Powershell

Well, this can also be checked in the PowerShell with a differentcommand. Run PowerShell and type 'Get-NetTCPConnection -LocalAddress 192.168.0.110 | Sort-Object LocalPort' and press enter. You will get detailed information about the IP and the local ports.

Get-NetTCPConnection -LocalAddress 192.168.0.110 | Sort-Object LocalPort

```
PS C:\Windows\system32> Get-NetTCPConnection -LocalAddress 192.168.0.110 | Sort-Object LocalPort

LocalAddress                LocalPort RemoteAddress                 RemotePort State

```

File Sharing

As an incident responder you should make sure that every file share is accountable and reasonable and there in no unnecessary file sharing.

net view

In order to check up on the file sharing options in command prompt, type 'net view \\<localhost>' and press enter.

> net view \\127.0.0.1

```
C:\Users\raj>net view \\127.0.0.1
Shared resources at \\127.0.0.1

Share name   Type   Used as   Comment

-------------------------------------------------------------------
jeenali      Disk
Users        Disk
The command completed successfully.
```

SMBShare

To see the file sharing in PowerShell, you can type 'Get -SMBShare' and press enter.

> Get-SMBShare

```
PS C:\Windows\system32> Get-SMBShare

Name      ScopeName Path          Description
----      --------- ----          -----------
ADMIN$    *         C:\Windows    Remote Admin
C$        *         C:\           Default share
D$        *         D:\           Default share
IPC$      *                       Remote IPC
jeenali   *         D:\jeenali
Users     *         C:\Users
```

Files

To view the files which could be malicious or end with a particular extension, you can use 'forfiles' command. Forfiles is a command line utility software. It was shipped with Microsoft Windows Vista. During that time, management of multiples files through the command line was difficult as most of the commands at that time we made to work on single files

Forfiles

To view the .exe files with their path to locate them in the command prompt, type 'forfiles /D -10 /S /M *.exe /C "cmd /c echo @path"' and press enter.

```
forfiles /D -10 /S /M *.exe /C "cmd /c echo @path"
```

```
C:\Users\raj>forfiles /D -10 /S /M *.exe /C "cmd /c echo @path"

"C:\Users\raj\AppData\Local\JxBrowser\browsercore-64.0.3282.24.unknown\browsercore32.exe"
"C:\Users\raj\AppData\Local\Microsoft\WindowsApps\GameBarElevatedFT_Alias.exe"
"C:\Users\raj\AppData\Local\Microsoft\WindowsApps\MicrosoftEdge.exe"
"C:\Users\raj\AppData\Local\Microsoft\WindowsApps\python.exe"
"C:\Users\raj\AppData\Local\Microsoft\WindowsApps\python3.exe"
"C:\Users\raj\AppData\Local\Microsoft\WindowsApps\Microsoft.DesktopAppInstaller_8wekyb3d8bbwe\python.exe"
"C:\Users\raj\AppData\Local\Microsoft\WindowsApps\Microsoft.DesktopAppInstaller_8wekyb3d8bbwe\python3.exe"
"C:\Users\raj\AppData\Local\Microsoft\WindowsApps\Microsoft.MicrosoftEdge_8wekyb3d8bbwe\MicrosoftEdge.exe"
"C:\Users\raj\AppData\Local\Microsoft\WindowsApps\Microsoft.XboxGamingOverlay_8wekyb3d8bbwe\GameBarElevated
"C:\Users\raj\AppData\Local\VMware\vmware-download-2B3C\cdstmp_ws-windows_15.5.6_16341506\VMware-workstatio
"C:\Users\raj\AppData\Roaming\uTorrent\helper\helper.exe"
"C:\Users\raj\AppData\Roaming\uTorrent\updates\3.5.5_45724.exe"
"C:\Users\raj\AppData\Roaming\uTorrent\updates\3.5.5_45724\utorrentie.exe"
"C:\Users\raj\Downloads\AnyDesk.exe"
"C:\Users\raj\Downloads\ARM Setup 2020.2.1.exe"
```

To View files without its path and more details of the particular file extension and its modification date, type 'forfiles /D -10 /S /M *.exe /C "cmd /c echo @ext @fname @fdate"'and press enter.

```
forfiles /D -10 /S /M *.exe /C "cmd /c echo @ext @fname @fdate"
```

```
C:\Users\raj>forfiles /D -10 /S /M *.exe /C "cmd /c echo @ext @fname @fdate"

"exe" "browsercore32" 8/6/2018
"exe" "GameBarElevatedFT_Alias" 6/30/2020
"exe" "MicrosoftEdge" 7/2/2020
"exe" "python" 6/29/2020
"exe" "python3" 6/29/2020
"exe" "python" 6/29/2020
"exe" "python3" 6/29/2020
"exe" "MicrosoftEdge" 7/2/2020
"exe" "GameBarElevatedFT_Alias" 6/30/2020

"exe" "helper" 8/7/2020
"exe" "3.5.5_45724" 7/27/2020
```
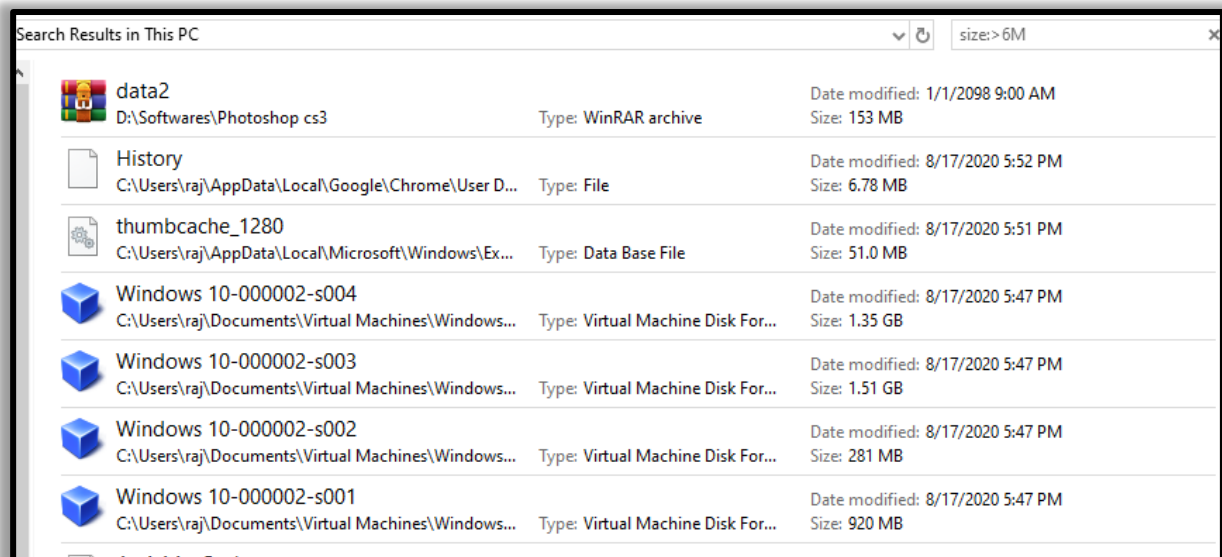

To check for files modified in the last 10 days type 'forfiles /p c: /S /D -10'.

```
forfiles /p c: /S /D -10
```

```
C:\>forfiles /p c: /S /D -10

Firewall Settings

The incident responder should pay attention to the firewall configurations and settings and should maintain it regularly.

To view the firewall configurations in the command prompt, type 'netsh firewall show config' and press enter to view the inbound and outbound traffic.

```
netsh firewall show config
```

```
C:\>netsh firewall show config

Domain profile configuration:
-------------------------------------------------------------------
Operational mode                  = Enable
Exception mode                    = Enable
Multicast/broadcast response mode = Enable
Notification mode                 = Enable

Allowed programs configuration for Domain profile:
Mode      Traffic direction    Name / Program
-------------------------------------------------------------------
Enable    Inbound              µTorrent (TCP-In) / C:\Users\raj\AppData\Roaming\uTo

Port configuration for Domain profile:
Port    Protocol  Mode    Traffic direction    Name
-------------------------------------------------------------------

Standard profile configuration (current):
-------------------------------------------------------------------
Operational mode                  = Enable
Exception mode                    = Enable
Multicast/broadcast response mode = Enable
Notification mode                 = Enable

Service configuration for Standard profile:
Mode      Customized  Name
-------------------------------------------------------------------
Enable    No          Network Discovery

Allowed programs configuration for Standard profile:
Mode      Traffic direction    Name / Program
-------------------------------------------------------------------
Enable    Inbound              µTorrent (TCP-In) / C:\Users\raj\AppData\Roaming\uTo
Enable    Inbound              Firefox (C:\Program Files\Mozilla Firefox) / C:\Prog

Port configuration for Standard profile:
Port    Protocol  Mode    Traffic direction    Name
-------------------------------------------------------------------

Log configuration:
-------------------------------------------------------------------
File location   = C:\Windows\system32\LogFiles\Firewall\pfirewall.log
Max file size   = 4096 KB
Dropped packets = Disable
Connections     = Disable
```

To view the firewall settings of the current profile in the command prompt, type 'netsh advfirewall show currentprofile' and press enter.

```
netsh advfirewall show currentprofile
```

```
C:\>netsh advfirewall show currentprofile

Public Profile Settings:
----------------------------------------------------------------------
State                                 ON
Firewall Policy                       BlockInbound,AllowOutbound
LocalFirewallRules                    N/A (GPO-store only)
LocalConSecRules                      N/A (GPO-store only)
InboundUserNotification               Enable
RemoteManagement                      Disable
UnicastResponseToMulticast            Enable

Logging:
LogAllowedConnections                 Disable
LogDroppedConnections                 Disable
FileName                              %systemroot%\system32\LogFiles\Firewall\pfirewall.log
MaxFileSize                           4096

Ok.
```

Sessions with other system

To check the session details that are created with other systems, you can type 'net use' in command prompt and press enter.

```
net use
```

```
Microsoft Windows [Version 10.0.18362.1016]
(c) 2019 Microsoft Corporation. All rights reserved.

C:\Users\raj>net use
New connections will be remembered.

Status       Local     Remote                      Network

-------------------------------------------------------------------------------
OK                     \\192.168.0.106\IPC$        Microsoft Windows Network
The command completed successfully.

C:\Users\raj>
```

Open Sessions

You can type 'net session' in the command prompt and press enter to see any open sessions of your system. It gives you the details about the duration of the session.

`net session`

Log Enteries

To view the log entries in GUI you can open the event viewer and see the logs. Press 'Windows+ R' and type 'eventvwr.msc' and press 'OK'.

Event Viewer
To export certain logs of a particular event in command prompt type 'wevtutil qe security' and press enter.

wevtutil qe security

```
C:\Windows\system32>wevtutil qe security
```

To get the event log list in the PowerShell, type 'Get-EventLog -list' and type the particular event in the supply value and you will get event details of that particular event.

Get-Eventlog -List

```
PS C:\Users\raj> Get-EventLog -List

  Max(K) Retain OverflowAction        Entries Log
  ------ ------ --------------        ------- ---
  20,480      0 OverwriteAsNeeded      12,676 Application
  20,480      0 OverwriteAsNeeded           0 HardwareEvents
     512      7 OverwriteOlder              0 Internet Explorer
  20,480      0 OverwriteAsNeeded           0 Key Management Service
     128      0 OverwriteAsNeeded         128 OAlerts
     512      7 OverwriteOlder              2 OneApp_IGCC
                                             Security
  20,480      0 OverwriteAsNeeded       7,887 System
  15,360      0 OverwriteAsNeeded         422 Windows PowerShell

PS C:\Users\raj> Get-EventLog

cmdlet Get-EventLog at command pipeline position 1
Supply values for the following parameters:
LogName: OAlerts

  Index Time          EntryType   Source                InstanceID Message
  ----- ----          ---------   ------                ---------- -------
    128 Aug 16 12:55  Information Microsoft Office ...         300 Microsoft Word...
    127 Aug 16 02:22  Information Microsoft Office ...         300 Microsoft Word...
```

Conclusion

Hence, one can make use of these commands as an incident responder and keep their systems away from threat.
